* 'Game Clock' is the expected GPU clock when running typical gaming applications, set to typical TGP (Total Graphics Power). Actual individual game clock results may vary.
* 'Boost Clock' is the maximum frequency achievable on the GPU running a bursty workload. Boost clock achievability, frequency, and sustainability will vary based on several factors, including but not limited to: thermal conditions and variation in applications and workloads.

FEATURES

Dual BIOS

Choosing the BIOS that fits your need: better overclocking or silent operation.

Intelligent Fan Controller

Utilizing temperature detection from a smart chip, fans will start running when the GPU reaches 60°C and shut down below 50°C.

GPU Direct-Contact Copper Plate

A large copper plate provides direct contact with the GPU while covering VRAM area to increase the heat transfer threshold to the max.

Back Plate

The metal back plate is extremely rigid to strengthen the card to prevent PCB bending.

Signature LED Color

Showcasing a cool and elegant aesthetic, the icy blue LED lighting sets a high-class tone.

Swappable Backplate

Put on the swappable backplate that comes with the Reva edition to get a new look for Hellhound.
