

Humly Room Display - Max Security Version

A part of Humly Workplace Solutions

Smooth, stylish and secure

humly

Humly Room Display

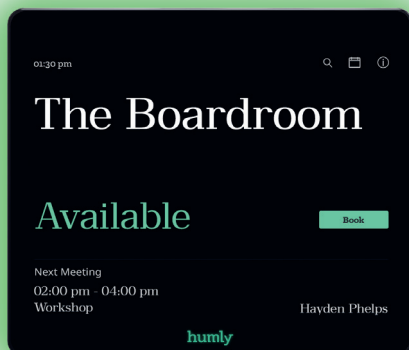

Humly Room Display is the perfect interactive display for your collaboration spaces. WiFi, Bluetooth and USB disabled from factory assures next level security. It will help you to find the space you already booked, or guide you to one that is available right now.

On the display it is clear who has booked the room and for how long. With Humly Room Display you no longer need to disturb an ongoing meeting and you will instantly remove much of the friction related to meeting room reservations. Max Security Version is delivered with the WiFi/Bluetooth and USB connector physically disabled on the hardware.

Its iconic timeless design will fit well into any modern office as its aesthetic has been developed to become part of the interior.

Less friction, more focus

Reducing frustration and distractions is the key to modern workplace success. Humly Room Display reduces friction and supports your employees' focus with clean, helpful and intuitive technology.

Humly Room Display
- Max Security Version.

High enterprise class security

Humly is proactively working with security and has a secure product development lifecycle. Humly is partnering with security consultants who are performing regular penetration tests. This way we can ensure enterprise class security. In the Max Security Version the WiFi/Bluetooth and USB connector physically disabled on the hardware to make the device even more secure. The radio of the device is inactive and the USB port does not work.

Long product life

Unlike many other competing solutions at the market, Humly Room Display hardware is purpose-built. Each component is selected to ensure that the device can be up and running everyday for years without failing. This is the reason why Humly Room Display has an estimated lifetime of +5 years.

Scalable

Humly Room Display is scalable to fit the needs of enterprise customers. Manage your fleet of Room Displays remotely in the Humly Cloud or on-premise and serve over a thousand room displays from a single server. Humly Control Panel provides a flexible administration interface to monitor and manage your entire solution from a single location.

Seamlessly integrated

Humly has an open API that makes it easy to build deep seamless integrations with other solutions. Next to this, Humly is proactively working on providing additional customer value by making integrations with market leading solutions within smart office and collaboration technology.

Timeless, award-winning design

Humly has worked with a renowned design team and our design decisions are made to provide frictionless support to office workers. The result is a modern device that complements a modern office with a floating effect and full RGB LED light creating an aura that is reflected on the wall.

Specifications

Visual interface

8 inch capacitive touch with anti-fingerprint treatment 48 LED RGB light aura and indication light

Connectivity

Wifi 802.11 a/b/g/n - Disabled
Ethernet RJ-45, 10/100/1000 Mbit, PoE & PoE+(IEEE 802.3af), 802.1x basic support NFC/RFID 13.56 Mhz (ISO/IEC 14443A/B), MIFARE 4K/1K
Bluetooth 5.0 - Disabled

Power

Power over Ethernet (PoE), or 12V AC/DC power adapter

Mounting

Mounting options for both standard and glass walls 5-way cable exit option for flexible installation

Compatible Platforms

Microsoft Office 365
Microsoft Exchange 2010-2013-2016-2019 Google Workspace
Nexus
IBM/Lotus Domino Smartcloud
IBM/Lotus Domino 8.5.3 - 9.x

User Interface Languages

Wide language support

Other

Open API for third party integration
Communication via real-time two-way connection
Remote management with multi-site support
Real-time monitoring & statistics
Touchless check-In

Whitelist frame ancestors for IFrame integrations
